Datasheet: MCA2060GA

Description: RAT ANTI BrdU
Specificity: BrdU
Other names: 5-BROMODEOXYURIDINE
Format: Purified
Product Type: Monoclonal Antibody
Clone: BU1/75 (ICR1)
Isotype: IgG2a
Quantity: 0.1 mg

Product Details

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.abdserotec.com/protocols.

Where this antibody has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the antibody for use in their own system using appropriate negative/positive controls.

(1)See recommended protocol below.
(2)See recommended protocol below.

Target Species

Chemical

Product Form

Purified IgG - liquid

Preparation

Purified IgG prepared by affinity chromatography on Protein G from tissue culture supernatant

Buffer Solution

Phosphate buffered saline

Preservative Stabilisers

0.09% Sodium Azide (NaN₃)

Approx. Protein Concentrations

IgG concentration 1.0mg/ml

Specificity

Rat anti BrdU antibody clone BU1/75 (ICR1), recognizes bromodeoxyuridine (known as BrdU or BrdUrd). Rat anti BrdU antibody clone BU1/75 (ICR1) reacts with BrdU incorporated into
single stranded DNA, attached to a protein carrier and free BrdU.

Rat anti BrdU antibody, clone BU1/75 (ICR1) cross reacts with chlorodeoxyuridine (CldU) but does not cross react with thymidine or iododeoxyuridine (Aten et al. 1992). BrdU, IdU and CldU are analogs of thymidine, they can incorporate into DNA during DNA synthesis replacing thymidine. Antibody detection of incorporated BrdU in cellular DNA is extensively referenced as an accurate method to monitor cell proliferation in vivo and in vitro. In cell proliferation assays BrdU staining is coupled with the use of a dye that binds total DNA such as propidium iodide (PI). BrdU can be administered diluted in the culture medium or, in vivo via intraperitoneal injection, subcutaneous osmotic pump implants (Tesfaiqzi et al. 2004) or in drinking water (Moser et al. 2004).

Clone BU1/75 (ICR1) has been used to detect CldU to study the speed of DNA replication fork (Bugler et al. 2010), in the detection of CldU label retaining stem cells (Kimoto et al. 2008) and label retaining neurons (Murata et al. 2011).

**Flow Cytometry**

Use 10ul of the suggested working dilution to label 10^6 cells in 100ul.

**Recommended Protocol**

**FLOW CYTOMETRY ANALYSIS**

Prepare the following solutions before proceeding:

- Phosphate buffered saline (PBS)
- 2N HCl containing 0.5% Triton X-100
- PBS containing 0.05% Tween-20
- PBS containing 1% BSA (PBS/BSA)
- 10mg/ml Propidium iodide (PI)
- 0.1M Na₂Ba₄O₇, pH 8.5

1. Add BrdU to the cell suspension in culture medium to a final concentration of 10 μmol/L and incubate for 30 minutes in a CO₂ incubator at 37°C.

2. Wash cells twice with PBS/BSA by centrifuging at 500g for 10 minutes, decant supernatant and resuspend in a minimum volume of PBS.

3. Add cells slowly into 5ml of 70% ethanol at -20°C, mixing continuously (vortex preferred). Incubate on ice for 30 minutes.

4. Centrifuge at 500g for 10 minutes, decant supernatant, and resuspend cell pellet.

5. Add 2ml of 2N HCl containing 0.5% Triton X-100 and incubate the cells for 30 minutes at...
6. Centrifuge at 500g for 10 minutes, decant supernatant and resuspend in 3 ml of 0.1M Na$_2$B$_4$O$_7$, pH 8.5.

7. Centrifuge at 500g for 10 minutes, decant supernatant and resuspend the cells in PBS/BSA + 0.05% Tween-20. Adjust cell concentration to $1 \times 10^7$/ml.

8. Aliquot 100ul of cell suspension into required number of 12 x 75mm tubes.

9. Incubate the cells with the BrdU antibody at the recommended dilution for 30 minutes at room temperature.

10. Add 2 ml of PBS/BSA and centrifuge the cells at 1000rpm for 5 minutes.

11. If a secondary antibody layer is required then decant the supernatant and incubate the cells with the secondary antibody for 30 minutes at room temperature. If no secondary antibody layer is required then proceed to step 13.

12. Wash the cells after the secondary antibody layer by repeating step 10.

13. Decant the supernatant and add 1ml of PBS containing 10µg/ml PI (Dilute the 10mg/ml solution of PI 1/1000 in a suitable volume of PBS).

14. Analyze cells by flow cytometry following the manufacturer’s instructions. The PI should be read on the appropriate channel set to the Peak/Area and not log scale.

**IMMUNOHISTOLOGY**

**Formalin-fixed paraffin-embedded tissue sections:**

Clone BU1/75 (ICR1) can be used for labeling paraffin-embedded tissue sections fixed in formalin. Denaturation of the DNA is critical for successful staining of BrdU. This can be achieved by exposing cells to heat, or acid. For heat-induced epitope retrieval, 10mM citrate buffer pH6.0 is recommended. Alternatively, a 30 min incubation in 2M HCl can be performed. The HCl must then be neutralized for 2 min with 0.1 M Na$_2$B$_4$O$_7$. Pretreatment of tissues with proteinase K should be avoided.

For Immunohistology references, please visit the following website:
www.abdserotec.com/support/brdu_antibody_clone_bu1_75_icr1_references-985.html

**Storage**

Store at +4°C or at -20°C if preferred.

This product should be stored undiluted.

Storage in frost free freezers is not recommended. Avoid repeated freezing and thawing as this may denature the protein. Should this product contain a precipitate we recommend
microcentrifugation before use.

**Shelf Life**  
18 months from date of despatch.

**Health And Safety Information**  
Material Safety Datasheet Documentation #10040 available at:  

**Regulatory**  
For research purposes only
