**Peroxidase-Labeled Antibody To Bovine IgG (H+L)**

*Produced in Goat*

**Catalog No.** 14-12-06  **Size** 0.5 mg

---

**DESCRIPTION**

Affinity purified antibody isolated from a pool of serum from goats immunized with purified bovine IgG was labeled with peroxidase by the periodate method of Nakane and Kawaoi (1).

**FORM/STORAGE**

Lyophilized. Store at 2-8°C until rehydrated. Stable for a minimum of 1 year when stored at 2-8°C.

**STABILIZER AND PRESERVATIVE**

Goat serum added as a protein stabilizer. No preservative added. Additional biological protection may be provided with 0.01% thimerosal. DO NOT USE SODIUM AZIDE. Non-sterile.

**ANTIBODY CONCENTRATION**

The concentration of affinity purified antibody is 0.5 mg as determined by UV absorbance at 280 nm.

**E/P RATIO**

Molar enzyme/antibody protein ratio = 4:1

**SPECIFICITY/CROSS REACTIVITY**

Tested by gel diffusion and ELISA techniques as applicable. This product reacts specifically with bovine IgG and may recognize other immunoglobulin types that have light chains in common with IgG. Reactivity to IgG subclasses has not been tested. Antibodies to bovine IgG may cross-react with immunoglobulins of other mammalian species if common binding sites are shared.

**REHYDRATION/STORAGE**

**Note:** Rehydration of antibodies in TBS or buffers other than those listed here is not recommended.

**Procedure A: 50% Glycerol**

At a working dilution, the level of glycerol is too small to affect most assays. The use of glycerol is not recommended when the conjugate is used in live cell work.

Rehydration: Add 0.5 mL reagent quality water to the product vial. Rotate the vial until the lyophilized pellet is totally dissolved. Add 0.5 mL glycerol to the product vial. Pipette up and down several times to ensure proper mixing.

Storage: This product may be stored either refrigerated or frozen as desired. Stable for a minimum of 1 year.

**Procedure B: KPL’s HRP Stabilizer**

Rehydration: Rehydrate with 1 mL of KPL’s HRP Stabilizer (see RELATED PRODUCTS). Rotate the vial until the lyophilized pellet is totally dissolved.

Storage: This product should be stored at 2-8°C. Stable for a minimum of 1 year.

**Procedure C: H₂O**

Rehydration: Rehydrate with 1 mL of reagent quality water. Rotate the vial until the lyophilized pellet is totally dissolved.

Storage: This product may be stored for up to 1 week refrigerated; thereafter, it should be stored frozen. Stable for a minimum of 1 year at -20°C.

**SUGGESTED WORKING DILUTIONS**

Optimal working concentrations should be determined experimentally. Prepare working dilution in TBS or other buffer such as 5X Detector Block or Milk Diluent/Blocking Solution (See RELATED PRODUCTS) immediately before use. BSA blockers should not be used with anti-Bovine antibodies, due to the possibility of cross-reactivity. These buffers not recommended for long term storage. Suggested starting dilutions are as follows. In many cases, the antibody may be diluted further than indicated.

**ELISA:**

1:500 - 1:2500  1.0 µg/mL - 0.2 µg/mL

**Blotting:**

1:2500 - 1:10000  0.2 µg/mL - 0.05 µg/mL

**Histo/Cytochemical Procedures:**

1:100 - 1:250  5.0 µg/mL - 2.0 µg/mL

**PRODUCT SAFETY AND HANDLING**

This product is considered non-hazardous as defined by The Hazard Communication Standard (29 CFR 1910.1200). Avoid contact with skin and eyes. In case of contact or spillage, clean with copious amounts of water. Disposal via sanitary sewer.
