## DATA SHEET for BSEP Vesicle Uptake Assay Reagents

## BSEP ProVesicle Uptake Assay Reagents

Cat. \#PB21001; Lot \#PN-B-1001
Contents: Kit contains reagents for 200 assays
A. BSEP Uptake Buffer: 10 mM HEPES, $\mathrm{pH} 7.5 ; 50 \mathrm{mM}$ sucrose, $100 \mathrm{mM} \mathrm{KNO}_{3} ; 12.5 \mathrm{mM} \mathrm{Mg}\left(\mathrm{NO}_{3}\right)_{2}$
B. $10 \times$ Wash Buffer: 100 mM Tris- $\mathrm{HCl}, \mathrm{pH} 7.4 ; 1 \mathrm{M} \mathrm{KNO}_{3} ; 500 \mathrm{mM}$ sucrose
C. 200 mM ATP
D. 200 mM AMP

Store at 4C upon receipt.
Representative data using PB21001 showing time dependence, concentration dependence and competitive inhibition of uptake at hBSEP when using $2^{\prime}, 7{ }^{\prime}$-dichlorodihydrofluorescein diacetate ( $\mathrm{H}_{2}$ DCFDA), a fluorescent substrate:

ATP-dependent $\mathrm{H}_{2}$ DCFDA ( $10 \mu \mathrm{M}$ ) uptake: $\mathbf{1 0 0 0} \mathrm{pmol} / \mathrm{mg} / \mathrm{min}$
IC $_{50}$ for reference inhibitor rifampicin: $\mathbf{3 0} \mu \mathrm{M}$

## Vesicle Uptake Assay Protocol:

1. Incubate a $95 \mu \mathrm{~L}$ reaction containing $50 \mu \mathrm{~g}$ vesicles and $\mathrm{H}_{2}$ DCFDA in BSEP Uptake Buffer ( 10 mM HEPES, $\mathrm{pH} 7.5 ; 50 \mathrm{mM}$ sucrose, $100 \mathrm{mM} \mathrm{KNO}_{3} ; 12.5 \mathrm{mM} \mathrm{Mg}\left(\mathrm{NO}_{3}\right)_{2}$ ) for 5 min at 37C.
2. Uptake was started by adding MgATP (or AMP) at a final of 5 mM and incubating for 20 min at 37 C .
3. Reaction was terminated by transferring vesicle samples to a filter plate and washing the filter plate 6 x with ice cold washing buffer ( 10 mM Tris- $\mathrm{HCl}, \mathrm{pH} 7.4 ; 100 \mathrm{mM} \mathrm{KNO} 3 ; 50 \mathrm{mM}$ sucrose).
4. Filter plate was dried and fluorescent counts measured with a spectrophotometer.

## Calculating ATP-Dependent Transport:

ATP-dependent transport = uptake in the presence of ATP - uptake in the presence of AMP.
This product is strictly for laboratory research use only.
