**Protocol** [Assay Protocol \(PDF\) \\*](#)

\*- For Reference Only. Dilution conditions within this protocol may differ for each lot number. Please Contact us for an updated version of the protocol.

**Sample Preparation** [Blood collection](#)  
[Tissue extraction](#)  
[CSF extraction](#)

**Catalog #** EK-003-12

**Standard Size** 96 wells

**Sensitivity** Minimum Detectable Concentration = 0.312ng/ml

**Range** 0.31-20ng/ml

| <b>Cross Reactivity</b> | <b>Peptide</b>        | <b>% Cross-reactivity</b> |
|-------------------------|-----------------------|---------------------------|
|                         | Leptin (Human)        | 0                         |
|                         | Leptin (Rat)          | 0                         |
|                         | Leptin (Mouse)        | 0                         |
|                         | TNF- $\alpha$ (Human) | 0                         |
|                         | IL-6 (Human)          | 0                         |
|                         | ET-1 (Human)          | 0                         |
|                         | VEGF (Human)          | 0                         |
|                         | Insulin (Human)       | 0                         |
|                         | Glucagon (Human)      | 0                         |
|                         | Somatostatin (Human)  | 0                         |
|                         | IGFBP-3 (Human)       | 0                         |
|                         | IGFBP-5 (Human)       | 0                         |
