

## Q-Analyzer Software for QAH-CHE-1

Q-Analyzer Software for use with Quantibody® Human Chemokine Array 1, multiplex ELISA array Kit for quantitative measurement of 40 Human Chemokines simultaneously

CODE: QAH-CHE-1-SW

### Q-Analyzer

---

The Q-Analyzer®, a software tool created specifically for the Quantibody array, will plot the standard curve for each analyte in addition to performing background subtraction/normalization. After imaging the slide with a laser scanner and extracting the densitometry values, protein quantification can be performed with virtually any ELISA analysis software. However, our array-specific Q-Analyzer® tool facilitates the process. Instead of tedious calculation of each analyte, the user can rapidly plot all the standard curves simultaneously in both linear regression and log-log models. The program removes outlier spots for greater accuracy, and then outputs the unknown sample concentrations automatically.

### Highlights

---

- Automatically analyzes antibody array data
- Generates graphs for easy visual comparison
- Excel-based software
- Fast and Easy to use - ?Copy and Paste?
- Q-Analyzer® plots standard curves in both linear regression and log-log models.

The products are furnished for **LABORATORY RESEARCH USE ONLY**. Not for diagnostic or therapeutic use.
