Biological Description

Function	<p>Bafilomycin A1 is a macrolide antibiotic derived from <i>Streptomyces griseus</i>. It selectively inhibits vacuolar-type H⁺-ATPases, allowing it to be used to differentiate between different types of ATPases. Bafilomycin also acts to inhibit autophagy by either blocking autophagosome-lysosome fusion, or by blocking lysosomal degradation.</p> <p>1. Gagliardi S., et al.
