Datasheet

CSF1 (Human) Recombinant Protein

Catalog Number: P5818

Regulation Status: For research use only (RUO)

Product Description: Human CSF1 (159 a.a.)

full-length recombinant protein with His tag expressed in

Barley grain (Hordeum vulgare).

Host: Plants

Theoretical MW (kDa): 21

Applications: Func, SDS-PAGE, WB-Re

(See our web site product page for detailed applications

information)

Protocols: See our web site at

http://www.abnova.com/support/protocols.asp or product

page for detailed protocols

Form: Lyophilized

Preparation Method: Barley grain (Hordeum vulgare)

expression system

Purification: Chromatography

Concentration: 100 ug/mL

Purity: > 98% by SDS-PAGE

Endotoxin Level: Endotoxin level is less than 0.005ng per ug protein (0.05EU/ug) as measured by turbidimetric

kinetic assay

Activity: Bioactivity is assayed by measuring the dose dependent effect of human MCSF on proliferation of M-NFS-60 cells. The ED50 lies typically in the range of

0.51-0.76 ng/mL.

Storage Buffer: Lyophilized from 5 mM TrisHCl, 80 mM

Arginine, pH 8.0

Storage Instruction: Store at -20 °C on dry atmosphere. After reconstitution with sterile water to a concentration of no less than 100 ug/mL, store at -20 °C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA).

Aliquot to avoid repeated freezing and thawing.

Entrez GenelD: 1435

Gene Symbol: CSF1

Gene Alias: MCSF, MGC31930

Gene Summary: The protein encoded by this gene is a cytokine that controls the production, differentiation, and function of macrophages. The active form of the protein is found extracellularly as a disulfide-linked homodimer, and is thought to be produced by proteolytic cleavage of membrane-bound precursors. The encoded protein may be involved in development of the placenta. Four transcript variants encoding three different isoforms have

been found for this gene. [provided by RefSeq]
