10 tissue section slide (paraffin embed, male, normal)
C57BL/6J mouse tissue section slide

Perfused with 4% paraformaldehyde, tissue are excised and fixed in 4% paraformaldehyde. After dehydration in alcohol, tissue is embedded in paraffin and sectioned at room temperature or at 4°C in a desiccated chamber.

Sections are mounted on Silane coated glass slides and one of the tissue section slides from each lot is stained with H & E for quality control.

Immunohistochemistry(IHC), In-Situ Hybridization(ISH), H&E stain, and other staining methods.
