

Monoclonal Antibody to MHC Class I H2 Kd/Dd - PE

Catalog No.:	AM08081RP-N
Quantity:	0.1 mg
Concentration:	0.1 mg/ml
Background:	The 'classical' MHC Class I molecules are histocompatibility antigens encoded by the H-2 gene complex and consist of heterodimers of highly polymorphic alpha chains noncovalently associated with the invariant beta 2-Microglobulin. (Ref.3,4) These antigens are expressed on most nucleated cells but expression varies on different cell types. MHC Class I molecules present endogenously synthesized peptides to CD8+ T lymphocytes, which are usually cytotoxic T cells. (Ref.5) MHC Class I antigens expressed on thymic epithelial cells regulate the positive and negative selection of CD8+ T cells during T cell ontogeny. (Ref.3,6)
Host / Isotype:	Mouse / IgG2a
Clone:	34-1-2S
Immunogen:	C3HalphaBDF1 mouse splenocytes.
Format:	State: Liquid purified Ig fraction. Purification: Liquid purified Ig fraction. Buffer System: PBS containing 0.09% Sodium Azide as preservative and a stabilizing agent. Label: PE – R-Phycoerythrin
Applications:	Flow Cytometry: < / = 1 µg/10e6 cells. Immunohistochemistry (Acetone-Fixed, Frozen Tissue Sections). Other applications not tested. Optimal dilutions are dependent on conditions and should be determined by the user.
Specificity:	This antibody is specific to an epitope in the alpha 3 domain that is common to H-2Kd and H-2Dd. It binds to a common determinant in the alpha 3 domains of H-2Kd and H-2Dd in the presence or absence of beta 2 Microglobulin. (Ref.7,8) It cross reacts with the alpha 3 domain of H-2Kb. (Ref.1,2) Species: Mouse. Other species not tested.
Storage:	Store the antibody undiluted at 2-8°C. DO NOT FREEZE! This product is photosensitive and should be protected from light. Avoid repeated freezing and thawing. Shelf life: one year from despatch.
