

## Monoclonal Antibody to MHC Class II I-Ap - FITC

<b>Catalog No.:</b>	CL072F
<b>Quantity:</b>	0.1 mg
<b>Concentration:</b>	0.1 mg/ml
<b>Host / Isotype:</b>	Mouse / IgG2a
<b>Clone:</b>	7-16.17
<b>Immunogen:</b>	B10.p Donor: BALB/c Fusion Partner: SP2/0
<b>Format:</b>	<b>State:</b> Liquid purified <b>Purification:</b> Protein G Chromatography <b>Buffer System:</b> PBS, 0.02% NaN <sub>3</sub> and EIA grade BSA as a stabilizing protein to bring total protein concentration to 4-5 mg/ml. <b>Label:</b> FITC
<b>Applications:</b>	Flow Cytometry. Other applications not tested. Optimal dilutions are dependent on conditions and should be determined by the user.
<b>Specificity:</b>	This monoclonal antibody is a cytotoxic antibody which defines a public I-A antigen. This antibody reacts with I-A antigen from the following I-A haplotypes: I-Ap,k,q,r,s,b. Using recombinant strains, reactivity against the b haplotype has been localized to the Ab subregion. This antibody can be used to quantitate or eliminate I-A bearing cells for precipitating I-A antigen. <b>Species:</b> Mouse. Other species not tested.
<b>Storage:</b>	Store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing. This product is photosensitive and should be protected from light. Shelf life: one year from despatch.
<b>General References:</b>	1. Harmon, R.C., Stein, N., Frelinger, J.A. 1983. Immunogenetics 18:541-545.
<b>Protocols:</b>	<b><u>FLOW CYTOMETRY ANALYSIS:</u></b>  <b>Method:</b> 1. Prepare a cell suspension in media A. For cell preparations, deplete the red blood cell population with Lympholyte®-M cell separation medium. 2. Wash 2 times. 3. Resuspend the cells to a concentration of 2x10 <sup>7</sup> cells/ml in media A. Add 50 µl of this suspension to each tube (each tube will then contain 1 x 10 <sup>6</sup> cells, representing 1 test).

**For research and in vitro use only. Not for diagnostic or therapeutic work.**

Material Safety Datasheets are available at [www.acris-antibodies.com](http://www.acris-antibodies.com) or on request.

4. To each tube, add 0.1 - 0.2 µg\* of this Ab per 10e6 cells.
5. Vortex the tubes to ensure thorough mixing of antibody and cells.
6. Incubate the tubes for 30 minutes at 4°C. (It is recommended that the tubes are protected from light, since most fluorochromes are light sensitive.)
7. Wash 2 times at 4°C.
8. Resuspend the cell pellet in 50 µl ice cold media B.
9. Transfer to suitable tubes for flow cytometric analysis containing 15 µl of propidium iodide at 0.5 mg/ml in PBS. This stains dead cells by intercalating in DNA.

**Media:**

- A. Phosphate buffered saline (pH 7.2) + 5% normal serum of host species + sodium azide (100 µl of 2M sodium azide in 100 mls).
- B. Phosphate buffered saline (pH 7.2) + 0.5% Bovine serum albumin + sodium azide (100 µl of 2M sodium azide in 100 mls).

**Results - Tissue Distribution by Flow Cytometry Analysis:**

Mouse Strain: BDP  
Cell Concentration: 1x10e6 cells per tests  
Antibody Concentration Used: 0.1 µg/10e6 cells  
Isotypic Control: FITC Mouse IgG2a

**Cell Source - Percentage of cells stained above control:**

Spleen: 76.7%  
 Lymph Node: 40.5%  
 Bone Marrow: 39.4%  
 Thymus: 55.6%

**Strain Distribution by Flow Cytometry Analysis:**

Procedure: As above  
Antibody Concentration: 0.2 µg/10e6 cells  
Strains Tested: see FIGURE 2 For a more detailed strain distribution - see reference 1.
