

## Fab Fragment of Goat anti-Human IgG [H&L] -Texas Red-

Alternate names: Human Immunoglobulin G

Catalog No.: R1388TR

Quantity: 1 mg

Host: Goat

Immunogen: Human IgG, whole molecule.

Format: State: Lyophilized Fab fragments.

Purification: Immunoaffinity chromatography.

**Buffer System:** 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2 containing 0.01% (w/v) Sodium Azide as preservative and 10 mg/ml BSA (IgG and Protease free) as

stabilizer.

**Label:** Texas Red – -- Sulfonyl Chloride (Molecular Weight 625 daltons)

Absorption / Emission: 596 nm / 620 nm Molar Ratio: 1.2 moles TR per mole of goat IgG.

Reconstitution: Restore with 1.0 ml of deionized water (or equivalent).

Applications: Suitable for Immunomicroscopy and Flow cytometry or FACS analysis as well as other

antibody based fluorescent assays requiring extremely low background levels, absence of

F(c) mediated binding, lot-to-lot consistency, high titer and specificity.

Other applications not tested. Optimal dilutions are dependent on conditions and should

be determined by the user.

Specificity: This product was prepared from monospecific antiserum by immunoaffinity

chromatography using Human IgG coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities, pepsin digestion and chromatographic

separation.

Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Goat

Serum.

No reaction was observed against anti-Pepsin or anti-Goat IgG F(c).

Storage: Store vial at 4°C prior to restoration. For extended storage reconstitute product with 50%

glycerol instead of water and then aliquot contents and freeze at -20°C or below. Centrifuge product if not completely clear after standing at room temperature.

This antibody is stable for one month at 4°C as an undiluted liquid.

Dilute only prior to immediate use. Avoid cycles of freezing and thawing. Shelf life: One year from despatch.
