

Monoclonal Antibody to CD14 - FITC

Alternate names: Monocyte differentiation antigen CD14, Myeloid cell-specific leucine-rich glycoprotein

Catalog No.: SM1066FT
Quantity: 25 μg
Concentration: 0.1 mg/ml

Background: CD14 (also known lipopolysaccharide (LPS) receptor) is expressed strongly on monocytes

and macrophage and weakly on the surface of neutrophils. CD14 is anchored to cells by linkage to glycosylphosphatidylinositol (GPI) and functions as a high affinity receptor for complexes of LPS and LPS binding protein (LBP). Soluble CD14, also binding to LPS, acts at physiological concentration as an LPS agonist and has, at higher concentrations, an LPS

antagonizing effect in cell activation.

Uniprot ID: <u>P08571</u>
NCBI: <u>9606</u>

Host / Isotype: Mouse / IgG2a

Clone: Tük4

Immunogen: CD14 Human

Format: State: Liquid purified IgG fraction

Purification: Affinity Chromatography on Protein G

Buffer System: PBS

Preservatives: 0.09% Sodium Azide

Stabilizers: 1% BSA

Label: FITC - Fluorescein Isothiocyanate Isomer 1

Applications: Flow Cytometry: Use 10 μl of neat-1/10 diluted antibody to label 10⁶ cells or 100 μl whole

blood.

Other applications not tested. Optimal dilutions are dependent on conditions and should

be determined by the user.

Specificity: This antibody recognises the CD14 cell surface antigen. CD14 is expressed strongly by most

peripheral blood monocytes and weakly on granulocytes.

Clone *TÜK4* has been shown to block SDF-induced chemotaxis of U937 cells in a dose-dependent manner (6). SM1066LE is recommended for this purpose.

Species Reactivity: Tested: Human.

Expected from sequence similarity: Canine, Goat, Cat, Rabbit, Mink, Bovine, Porcine,

Sheep, Cynomolgus Monkey, Llama.

SM1066FT: Monoclonal Antibody to CD14 - FITC

Storage:

Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer.

This product is photosensitive and should be protected from light.

Avoid repeated freezing and thawing.

Shelf life: one year from despatch.
