

Anti-Human CD83 FITC

Catalogue Number : 05911-50

RUO: For Research Use Only. Not for use in diagnostic procedures.

Product Information

Clone: HB15e

Format/Conjugate: FITC

Concentration: 5 uL (1.0 ug)/test

Reactivity: Human

Laser: Blue (488nm)

Peak Emission: 520nm

Peak Excitation: 494nm

Filter: 530/30

Brightness (1=dim,5=brightest): 3

Isotype: Mouse IgG1, kappa

Formulation: Phosphate-buffered aqueous solution, ≤0.09% Sodium azide, may contain carrier protein/stabilizer, pH7.2.

Storage: Product should be kept at 2-8°C and protected from prolonged exposure to light.

Applications: FC

Description

The HB15e monoclonal antibody specifically reacts with human CD83, a 43kDA single chain type I glycoprotein also known as HB15. A useful marker for mature human dendritic cells, it is also expressed on some activated lymphocytes. CD83's precise role has not been deduced, but it is thought to be involved in antigen presentation.

Preparation & Storage

The product should be stored undiluted at 4°C and should be protected from prolonged exposure to light. Do not freeze.

The monoclonal antibody was purified utilizing affinity chromatography and unreacted dye was removed from the product.

Application Notes

The antibody has been analyzed for quality through the flow cytometric analysis of the relevant cell type. The antibody can be used at less than or equal to 5 µL per test. A test is the amount of antibody required to stain a cell sample in the final volume of 100 µL.
