

Rabbit antibody to mouse APP (44-62): whole serum

Catalogue No.:	R-071-100
Description:	<p>FUNCTION: Functions as a cell surface receptor and performs physiological functions on the surface of neurons relevant to neurite growth, neuronal adhesion and axonogenesis. Involved in cell mobility and transcription regulation through protein-protein interactions. Can promote transcription activation through binding to APBB1/Tip60 and inhibit Notch signaling through interaction with Numb. Couples to apoptosis-inducing pathways such as those mediated by G(O) and JIP. Inhibits G(o) alpha ATPase activity. Acts as a kinesin I membrane receptor, mediating the axonal transport of beta-secretase and presenilin 1. May be involved in copper homeostasis/oxidative stress through copper ion reduction. Can regulate neurite outgrowth through binding to components of the extracellular matrix such as heparin and collagen I and IV. FUNCTION: Beta-amyloid peptides are lipophilic metal chelators with metal-reducing activity. Bind transient metals such as copper, zinc and iron. Rat and mouse beta-amyloid peptides bind only weakly transient metals and have little reducing activity due to substitutions of transient metal chelating residues. Beta-APP42 may activate mononuclear phagocytes in the brain and elicit inflammatory responses. Promotes both tau aggregation and TPK II-mediated phosphorylation (By similarity). FUNCTION: The gamma-CTF peptides as well as the caspase-cleaved peptides, including C31, are potent enhancers of neuronal apoptosis. SUBUNIT: Binds, via its C-terminus, to the PID domain of several cytoplasmic proteins, including APBB family members, the APBA family, MAPK8IP1, SHC1, Numb and Dab1. Binding to Dab1 inhibits its serine phosphorylation. Also interacts with GPCR-like protein BPP, FPRL1, APPBP1, IB1, KNS2 (via its TPR domains), APPBP2 (via BaSS) and DDB1. In vitro, it binds MAPT via the MT-binding domains. Associates with microtubules in the presence of ATP and in a kinesin-dependent manner. Interacts, through a C-terminal domain, with GNAO1. Amyloid beta-42 binds CHRNA7 in hippocampal neurons. Beta-amyloid associates with HADH2. TISSUE SPECIFICITY: different isoforms in different tissues: kidney. brain. liver. hippocampus, substantia nigra pars compacta and cerebellum. In the cerebellum, all the isoforms are abundantly expressed in Purkinje cells.</p>
Batch No.:	See product label
Unit size:	100 µl
Antigen:	A synthetic peptide (HMNVQNGKWESDPGKTC, aa: 44-62) as part of mouse APP isoform A conjugated to the immunogenic protein Blue Carrier Protein
Other Names:	Amyloid beta A4 protein; ABPP; Alzheimer disease amyloid protein homolog; Amyloidogenic glycoprotein; AG
Accession:	APP_MOUSE
Produced in:	Rabbit
Purity:	Whole serum
Applications:	IHC. Recommended to be used at a dilution of 1:500 to 1:3000 for immunohistochemistry. This antiserum has not yet been tested for western blot. Biosensis recommends optimal dilutions/concentrations should be determined by the end user.
Specificity:	

FOR RESEARCH USE ONLY

Rabbit antibody to mouse APP (44-62): whole serum

Specificity for APP was confirmed by IHC.

Cross-reactivity: This antiserum is known to react with rat APP. Reactivity with other species have not yet been tested.

Form: Lyophilised

Reconstitution: Reconstitute in 100 µl of sterile water. Centrifuge to remove any insoluble material.

Storage: After reconstitution keep aliquots at -20°C for a higher stability, and at 4°C with an appropriate antibacterial agent. Glycerol (1%) may be added for an additional stability. Avoid repetitive freeze/thaw cycles.
