CnT-Prime Keratinocyte/Melanocyte Co-Culture Medium, Higher Certified

CnT-PR-KM-HC is a fully defined and clinically ready medium for 2D co-culture of primary human keratinocytes and melanocytes.

SPECIES	Developed for primary human cells. May be used for other species as well, including mouse.
TISSUE TYPE	Epithelia
PACK SIZE	500 mL bottle, fully supplemented with growth factors. No further additions required.
PRODUCT USE	Developed specifically to maintain balanced co-culture of keratinocytes and melanocytes. Requires a specific protocol for cell preparation and seeding. Please contact support@cellntec.com for more details.
MEDIA TYPE	2D-Prolif
CHEMICALLY DEFINED	Yes
ACF	Yes
CULTURE CONDITION	This medium is designed for use in a 5% CO ₂ atmosphere. For suggested seeding and culture protocols, please visit the resources section of www.cellntec.com
NOTE	For routine cell cultivation, CELLnTEC does not recommend the use of antibiotics / antimycotics.
STORAGE / SHELF LIFE	Store frozen below -15 °C. For best before date, see label. To prepare medium for use, thaw in a water bath set to room temperature. Do not use higher temperatures. Swirl frequently, approximately every 20 min, to ensure good mixing of the ingredients and temperature equilibration. Stop at melting of the last bit of ice to prevent warming at the end of the thawing process. Once thawed, medium has a remaining shelf-life of 6 weeks when stored at 4 °C in the dark. Certain culture media components are very sensitive to light. Minimize light exposure at all times.
QUALITY CONTROL	Media functionality is tested by evaluating growth and morphology of primary human epithelial cells and melanocytes. Tested for osmolality, pH, sterility, endotoxins, mycoplasma and concentration of various ions.
SHIPPING CONDITION	Medium is shipped frozen.
INTENDED USE	For research use only. Not for use in therapy or diagnostics.
