## Exalpha

CD14 FITC. Mouse Single-Color Reagent FWKW, Human

## Comments

Anti Human Monocyte/Macrophage 53kD FITC

## Concentration

See vial for concentration

## Ship Conditions

Room Temperature
Storage Customer

## Ordering Information <br> Catalog Number <br> 0142 <br> SIzE <br> 100 Tests <br> Form <br> FITC <br> Host/Clone <br> Mouse Clone FWKW <br> Formulation

Provided as sterile filtered solution in phosphate buffered saline with $0.08 \%$ sodium azide and $0.2 \%$ carrier protein Isotype
IgG2b
Applications
Flow Cytometry

Product should be stored at $4-8^{\circ} \mathrm{C}$. DO NOT FREEZE

## Stability

Reagents are stable for the period shown on the vial label when stored properly

## Use

PBMC: Add10 $\mu$ I of MAB/10^6 PBMC in $100 \mu \mathrm{I}$ PBS. Mix gently and incubate for 15 minutes at 2 to $8^{\circ} \mathrm{C}$. Wash twice with PBS and analyze or fix with $0.5 \% \mathrm{v} / \mathrm{v}$ of paraformaldehyde in PBS and analyze. WHOLE BLOOD: Add $10 \mu \mathrm{l}$ of MAB/100 $\mu$ l of whole blood. Mix gently and incubate for 15 minutes at room temperature $\left(20^{\circ} \mathrm{C}\right)$. Lyse the whole blood. Wash once with PBS and analyze or fix with $0.5 \% \mathrm{v} / \mathrm{v}$ of paraformaldehyde in PBS and analyze. See instrument manufacturer's instructions for Lysed Whole Blood and Immunofluorescence analysis with a flow cytometer or microscope. ALLOPHYCOCYANIN: (APC) conjugates are analyzed in multi-color flow cytometry with instruments equipped with a second laser and proper filters. Laser excitation is at 633 nm with a Helium Neon (HeNe) laser or a 600-640 nm (633 nm) range for a Dye laser. Peak fluorescence emission is at 660 nm .
