

11-235-C025

Monoclonal Antibody to CD71 Purified Antibody (0.025 mg)

Clone: MEM-75

Isotype: Mouse IgG1

Specificity: The antibody MEM-75 reacts with CD71 antigen (transferrin receptor), a 95 kDa

type II homodimeric transmembrane glycoprotein expressed on activated B and T lymphocytes, macrophages and erythroid precursors; it is lost on resting blood

leukocytes.

The antibody MEM-75 does not block binding of transferrin to the receptor.

HLDA IV; WS Code A 45 HLDA V; WS Code T T-165

Regulatory Status: RUO

Immunogen: NALM-6 human pre-B cell line

Species Reactivity: Human

Application: Flow Cytometry

Recommended dilution:4 µg/ml

Immunoprecipitation Immunocytochemistry

Purity: > 98% (by SDS-PAGE)

Purification: Purified by protein-A affinity chromatography

Concentration: 1 mg/ml

Storage Buffer: Tris buffered saline (TBS) with 15 mM sodium azide, approx. pH 8.0

Storage / Stability: Store at 2-8°C. Do not freeze. Do not use after expiration date stamped on vial

abel.

Expiration: See vial label

Lot Number: See vial label

Background: CD71 (transferrin receptor) is a type II transmembrane glycoprotein expressed as homodimer in erythroid blood cell line and in activated leukocytes. Upon binding of

holotransferrin (complex of transferrin and iron ions), CD71 is internalized by clathrin-mediated endocytosis. Acidification of endosomes by vesicular membrane proton pumps leads to dissociation of iron ions, whereas transferrin (apotransferrin) remains associated with CD71 and recycles to the cell surface, where it is released upon exposure to normal pH. CD71 is also involved in uptake

of non-transferrin bound iron.
