

1F-106-C025

Monoclonal Antibody to Cytokeratin 18 Fluorescein (FITC) conjugated (0.025 mg)

Clone: C-04

Isotype: Mouse IgG1

Specificity: The antibody C-04 reacts with Cytokeratin 18 (45 kDa), a member of intermediate

filaments subfamily represented in epithelial tissues.

Regulatory Status: RUO

Immunogen: Cytoskeleton preparation of epidermal carcinoma cell line A431.

Species Reactivity: Mammalian

Preparation: The purified antibody is conjugated with Fluorescein isothiocyanate (FITC) under

optimum conditions. The reagent is free of unconjugated FITC.

Concentration: 0.1 mg/ml

Storage Buffer: The reagent is provided in stabilizing phosphate buffered saline (PBS) solution

containing 15mM sodium azide.

Storage / Stability: Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not

use after expiration date stamped on vial label.

Usage: The reagent is intended for Flow Cytometry analysis.

Expiration: See vial label

Lot Number: See vial label

Background: Cytokeratins are a subfamily of intermediate filaments and characterized by

remarkable biochemical diversity. Cytokeratins are represented in epithelial tissues by at least 20 different polypeptides, molecular weight between 40 kDa and 68 kDa. The individual cytokeratin polypeptides are designated 1 to 20 and divided into the type I (acidic cytokeratins 9-20) and type II (basic to neutral cytokeratins

1-8) families.

Cytokeratins 18 belongs to type I family (acidic cytokeratins).
