## Monoclonal Antibody to HLA-DR Fluorescein (FITC) conjugated (25 tests)

Clone: MEM-12

**Isotype:** Mouse IgG1

Specificity: The antibody MEM-12 recognizes common epitope on human HLA-DR which is

dependent on the association of alpha and beta chains. DR is the isotype of human MHC Class II molecules expressed on antigen-presenting cells (APC;

dendritic cells, B lymphocytes, monocytes, macrophages).

Regulatory Status: RUO

**Immunogen:** thymocyte membrane

Species Reactivity: Human

**Preparation:** The purified antibody is conjugated with Fluorescein isothiocyanate (FITC) under

optimum conditions. The reagent is free of unconjugated FITC and adjusted for

direct use. No reconstitution is necessary.

Storage Buffer: The reagent is provided in stabilizing phosphate buffered saline (PBS) solution

containing 15mM sodium azide.

Storage / Stability: Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not

use after expiration date stamped on vial label.

**Usage:** The reagent is designed for Flow Cytometry analysis of human blood cells using

20 μl reagent / 100 μl of whole blood or 10° cells in a suspension.

The content of a vial (0.5 ml) is sufficient for 25 tests.

**Expiration:** See vial label

Lot Number: See vial label

Background: HLA-DR, a member of MHC class II glycoproteins, that bind intracellularly

processed peptides and present them to the Th cells, is composed of 36 kDa alpha chain and 27 kDa beta chain, both anchored in the plasma membrane. Together with other MHC II molecules HLA-DR plays a central role in the immune system.
