

1F-505-T100

Monoclonal Antibody to Lambda light chains Fluorescein (FITC) conjugated (100 tests)

Clone: 4C2

Isotype: Mouse IgG1

Specificity: The antibody 4C2 reacts with lambda light chains (22.5 kDa) of human

immunoglobulin.

Regulatory Status: RUO

Species Reactivity: Human

Negative Species: Hamster, Sheep, Goat, Rabbit, Guinea pig

Preparation: The purified antibody is conjugated with Fluorescein isothiocyanate (FITC) under

optimum conditions. The reagent is free of unconjugated FITC and adjusted for

direct use. No reconstitution is necessary.

Storage Buffer: The reagent is provided in stabilizing phosphate buffered saline (PBS) solution

containing 15mM sodium azide.

Storage / Stability: Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not

use after expiration date stamped on vial label.

Usage: The reagent is designed for Flow Cytometry analysis of human blood cells using

20 μl reagent / 100 μl of whole blood or 10^b cells in a suspension.

The content of a vial (2 ml) is sufficient for 100 tests.

Expiration: See vial label

Lot Number: See vial label

Background: Immunoglobulin classes share the same basic four polypeptide chain structure of

two heavy chains (five heavy chains types) and two light chains (kappa, lambda; both having a molecular weight of 22.5kDa). Kappa and lambda consist of a variable region and a constant region and can easily be differentiated by the antigenic properties of the constant region. The ratio of kappa to lambda is 70:30.
