

PB-226-T025

Monoclonal Antibody to CD48 Pacific Blue™ conjugated (25 tests)

Clone: **MEM-102** Isotype: Mouse IgG1 The antibody MEM-102 reacts with CD48 antigen (Blast-1), a 40-47 kDa **Specificity:** GPI-anchored membrane protein (immunoglobulin supergene family) widely expressed on hematopoietic cells; it is negative on granulocytes, platelets and erythrocytes. HLDA V; WS Code AS S014 **Regulatory Status:** RUO Immunogen: Raji human Burkitt's lymphoma cell line **Species Reactivity:** Human, Non-Human Primates **Preparation:** The purified antibody is conjugated with Pacific Blue[™] under optimum conditions. The conjugate is purified by size-exclusion chromatography and adjusted for direct use. No reconstitution is necessary. Storage Buffer: The reagent is provided in stabilizing phosphate buffered saline (PBS) solution containing 15mM sodium azide. Storage / Stability: Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not use after expiration date stamped on vial label. Usage: The reagent is designed for Flow Cytometry analysis of human blood cells using 4 µl reagent / 100 µl of whole blood or 10^b cells in a suspension. The content of a vial (0.1 ml) is sufficient for 25 tests. **Expiration:** See vial label Lot Number: See vial label CD48 (Blast-1) belongs to the CD2 subset of the Ig superfamily, which includes **Background:** CD2, CD2F-10, CD58, CD84, CD150, CD229, CD244 and others. These molecules bind to the same or another members of their family, thus mediate homotypic or heterotypic adhesion. CD48 is a GPI-anchored protein broadly expressed on hematopoietic cells and serves as a high affinity ligand for 2B4 and low affinity ligand for CD2. 2B4-CD48 interaction among NK cells and NK-T cells regulates cell proliferation. Signaling through CD48 results in eosinophil activation and CD48 expression is increased in several infectious diseases.

For laboratory research only, not for drug, diagnostic or other use.
