

PC-647-T100

Monoclonal Antibody to CD61 PerCP (100 tests)

Clone: VIPL2

Isotype: Mouse IgG1

Specificity: The mouse monoclonal antibody VIPL2 recognizes CD61, a 90-110 kDa

transmembrane glycoprotein of integrin family, expressed on platelets, megacaryocytes, osteoclasts, endothelial cells and other cell types, including

leucocytes and smooth muscle cells.

HLDA V.; WS Code 5T-124

Regulatory Status: RUO

Species Reactivity: Human, Non-Human Primates

Preparation: The purified antibody is conjugated with Peridinin-chlorophyll-protein complex

(PerCP) under optimum conditions. The conjugate is purified by size-exclusion

chromatography and adjusted for direct use. No reconstitution is necessary.

Storage Buffer: The reagent is provided in stabilizing phosphate buffered saline (PBS) solution

containing 15mM sodium azide.

Storage / Stability: Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not

use after expiration date stamped on vial label.

Usage: The reagent is designed for Flow Cytometry analysis of human blood cells using

10 μl reagent / 100 μl of whole blood or 10⁶ cells in a suspension.

The content of a vial (1 ml) is sufficient for 100 tests.

Expiration: See vial label

Lot Number: See vial label

Background: CD61 (beta3 integrin) is a transmembrane glycoprotein, which associates with

CD41 or CD51 molecules to form heterodimeric adhesion receptores. CD41/CD61 complex is one of the earliest markers of the megakaryocytic lineage. It binds to fibronectin, fibrinogen and von Willebrand factor, and is involved in platelet aggregation. CD51/CD61 complex has similar binding properties and is involved in

modulating migration and survival of angiogenic endothelial cells.
