

T7-700-T025

Monoclonal Antibody to CD123 PE-Cy[™]7 conjugated (25 tests)

Clone: 6H6

Isotype: Mouse IgG1

Specificity: The mouse monoclonal antibody 6H6 recognizes CD123 (interleukin 3 receptor

alpha), a 60-70 kDa transmembrane protein expressed by myeloid precursors, megakaryocytes, macrophages, dendritic cells, mast cells, basophils, and some B

cells. This antibody does not inhibit IL-3 binding to its receptor.

Regulatory Status: RUO

Immunogen: IL3 receptor alpha chain expressed on the surface of transiently transfected COS

cells

Species Reactivity: Human

Preparation: The purified antibody is conjugated with tandem dye PE-Cy™7 under optimum

conditions. The conjugate is purified by size-exclusion chromatography and

adjusted for direct use. No reconstitution is necessary.

Storage Buffer: The reagent is provided in stabilizing phosphate buffered saline (PBS) solution

containing 15mM sodium azide.

Storage / Stability: Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not

use after expiration date stamped on vial label.

Usage: The reagent is designed for Flow Cytometry analysis of human blood cells using 4

μl reagent / 100 μl of whole blood or 10⁶ cells in a suspension.

The content of a vial (0.1 ml) is sufficient for 25 tests.

Expiration: See vial label

Lot Number: See vial label

Background: CD123 is the alpha chain of interleukin 3 receptor (IL-3R alpha). This subunit

heterodimerizes with the interleukin 3 receptor beta chain (CD131), which is shared with other receptors. CD123 interacts with IL-3 specifically, but with low affinity, and association with the beta subunit confers high affinity binding to the receptor heterodimer. Both chains are required for signaling, but receptor activation and signal transduction depend on IL-3 binding to CD123 as the initial

step.
