

## T9-671-T025

## Monoclonal Antibody to CD107a PerCP-Cy™5.5 conjugated (25 tests)

Clone:

Isotype:

Mouse IgG1

H4A3

Specificity: The mouse monoclonal antibody H4A3 recognizes CD107a, an approximately 100-120 kDa glycoprotein expressed mainly on lysosomal, but also on the plasma membrane.

Regulatory Status: RUO

Immunogen: Human PBMC

**Species Reactivity:** Human, Non-Human Primates, Mouse

- **Preparation:** The purified antibody is conjugated with tandem dye PerCP-Cy<sup>™</sup>5.5 under optimum conditions. The conjugate is purified by size-exclusion chromatography and adjusted for direct use. No reconstitution is necessary.
- **Storage Buffer:** The reagent is provided in stabilizing phosphate buffered saline (PBS) solution containing 15mM sodium azide.
- **Storage / Stability:** Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not use after expiration date stamped on vial label.
- **Usage:** The reagent is designed for Flow Cytometry analysis of human blood cells using 4  $\mu$ l reagent / 100  $\mu$ l of whole blood or 10<sup>6</sup> cells in a suspension. The content of a vial (0.1 ml) is sufficient for 25 tests.
- Expiration: See vial label
- Lot Number: See vial label
- **Background:** CD107a (lysosome-associated membrane protein-1, LAMP-1), together with LAMP-2, is a major constituent of lysosomal membrane, 1-2% of total CD107a is found also on the plasma membrane. The LAMP proteins are involved in lysosome biogenesis and are required for fusion of lysosomes with phagosomes. Increased CD107a immunoreactivity is observed in neurones, and in glial cells surrounding senile plaques in Alzheimers disease cases and is localized mainly in medullary epithelial cells, single macrophages and lymphocytes in acute thymic involution. CD107a is a good marker of mast cell activation.

For laboratory research only, not for drug, diagnostic or other use.
