APPLICATIONS

Anti-c-Myc is a mouse monoclonal IgG₁ against a epitope corresponding to amino acids 408-439 within the carboxy terminal domain of c-Myc of human origin. It is specific for c-Myc p67 and not cross-reactive with N-Myc or L-Myc proteins

It is widely used in combination with eukaryotic expression vectors encoding proteins with c-Myc (amino acids 408-439) epitope tag

In AntibodyArray™ assays, the protein of interest can be expressed as c-Myc fusion protein. Then it can be identified with the HRP-conjugated anti-c-Myc antibody.
