Usage Summary:	This HIS24 antibody has been tested by flow cytometric analysis of rat splenocyte suspensions. This can be used at less than or equal to 1 ug per test. A test is defined as the amount (ug) of antibody that will stain a cell sample in a final volume of 100 ul. Cell number should be determined empirically but can range from 10 ⁵ to 10 ⁸ cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
Uses:	Flow Cytometry (Optimal dilution to be determined by the researcher)
Size:	100 µg

Flow Cytometry Image:

Surface staining of rat splenocytes with 0.05 ug FITC anti-rat CD45R (HIS24). Appropriate isotype controls were used (open histogram). Total viable cells were used for analysis.
