Usage Summary:	Suitable for use in Flow cytometry: Designed to quantitatively determine the percentage of cells bearing TRA-1-60 (R) within a population and qualitatively determine the density of TRA-1-60 (R) on cell surfaces by flow cytometry. Cell surface expression of TRA-1-60 (R) is determined by flow cytometry using 488 nm wavelength excitation and monitoring emitted fluorescence with a detector BG01V cells were stained with PE-conjugated anti-human TRA-1-6 (filled histogram) or isotype control (open histogram).
Uses:	Flow Cytometry (Optimal dilution to be determined by the researcher)
Size:	100 tst
