

PRODUCT DATA SHEET

9(E),11(E)-Octadecadienoic acid

Catalog No: 1181

Common Name: 9-*trans*,11-*trans* CLA

Source: synthetic

Solubility: chloroform, methanol, ethanol,
hexane

CAS No: 544-71-8

Molecular Weight: 280

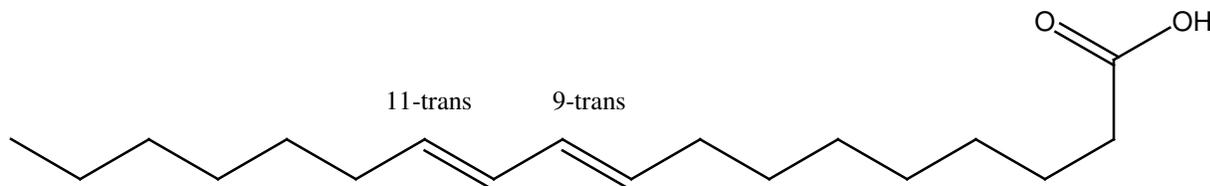

Storage: -20°C

Purity: TLC: >98%, GC: >98%; identity
confirmed by MS

TLC System: hexane/ethyl ether/acetic
acid (80:20:1 by Vol.)

Appearance: solid

Molecular Formula: C₁₈H₃₂O₂

Application notes:

9(E),11(E)-Octadecadienoic acid is a conjugated linoleic acid (CLA), an isomer of linoleic acid. CLA is found mostly in lipids originating in ruminant animals including dairy products. It has several biological properties including anti-carcinogenic activity, suppressing *in vitro* growth of human melanoma, colorectal, and breast cancer cells, and exhibiting anti-atherogenic activity.¹ It is thought that CLA itself may not have anti-oxidant capabilities but may produce substances which protect cells from the detrimental effects of peroxides. 9(E),11(E)-CLA is a minor component in natural sources of CLA and is used as a marker for free radical activity. Also, due to its being a minor component it is very helpful as a comparison to the major isomers 9(Z),11(E)-CLA and 10(E),12(Z)-CLA. 9(E),11(E)-CLA can exert anti-inflammatory effects by increasing an endogenous repressor of IL-1 signaling². It can induce expression of genes involved in lipid metabolism of human macrophages and is a dietary occurring agonist of liver X receptor alpha.³
