CAS Number: 14653-77-1

IUPAC Name: 2-[(3-Aminopropyl)amino]ethanethiol dihydrochloride

Description:

Cell-permeable reactive oxygen species scavenger that activates p53 through a JNK-dependent signaling pathway. Activates p21^{waf-1} and MDM2, represses transcription of Myc and thymidine kinase, and inhibits DNA topoisomerase II α . Induces cell cycle arrest and exhibits cytoprotective activity towards normal cells but not cancer cells in vivo. Also exhibits broad spectrum antiviral activity in vitro.

Storage: Desiccate at -20°C

Solubility & Usage Info:

water to 100 mM

DMSO to 100 mM

CAUTION - This product is sensitive to oxidation. We recommend that solutions are stored frozen and kept under inert atmosphere.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
