Description:

Potent glycogen synthase kinase-3 (GSK-3) inhibitor (K_i = 0.6 nM for GSK-3 α and GSK-3 β). Displays high selectivity (> 50-fold) for GSK-3 over a panel of other kinases tested, including CDK family members. Decreases phosphorylation of microtubule-associated protein Tau in vitro; protects rat primary cortical neurons against β amyloid and glutamate challenge. Brain penetrant.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
