CAS Number: IUPAC Name:

(5Z)-5-[(4-Fluoro-2-hydroxyphenyl)methylene]-2-(tetrahydro-1-(2H)-pyridazinyl)-4(5H)-thiazolone

Description:

Selective KCC2 K+-Cl- cotransporter activator (EC₅₀ = 616 nM). Exhibits selectivity for KCC2 over other KCC family members, NKCC1 and GABA_A receptors, as well as 55 other receptors. Enhances Cl- transport and increases KCC2 plasma membrane expression in spinal slices with reduced KCC2 function. Alleviates hypersensitivity in rats with peripheral nerve injury.

Physical and Chemical Properties:

Batch Molecular Formula: C₁₄H₁₄FN₃O₂S Batch Molecular Weight: 307.34 Physical Appearance: Yellow powder

Minimum Purity: >98%

Batch Molecular Structure:

Storage: Store at +4°C

CAUTION - This product is light sensitive and we recommend that the solid material and any solutions obtained are protected from exposure to light.

Catalog No.: 5242

Solubility & Usage Info:

DMSO to 100 mM

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
