# Mouse IL-18 BPd Antibody

Antigen Affinity-purified Polyclonal Goat IgG Catalog Number: AF122

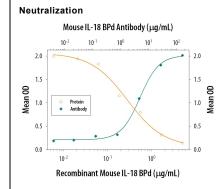

DESCRIPTION		
Species Reactivity	Mouse	
Specificity	Detects mouse IL-18 BPd in direct ELISAs and Western blots. In Western blots, approximately 25% cross-reactivity with recombinant mouse IL-18 BPc is observed and less than 2% cross-reactivity with recombinant human IL-18 BPa is observed.	
Source	Polyclonal Goat IgG	
Purification	Antigen Affinity-purified	
Immunogen	Mouse myeloma cell line NS0-derived recombinant mouse IL-18 BPd Thr27-Ala191 Accession # AAD17194	
Endotoxin Level	<0.10 EU per 1 µg of the antibody by the LAL method.	
Formulation	Lyophilized from a 0.2 µm filtered solution in PBS with Trehalose. See Certificate of Analysis for details. *Small pack size (-SP) is supplied as a 0.2 µm filtered solution in PBS.	

### **APPLICATIONS**

Please Note: Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.

	Recommended Concentration	Sample
Western Blot	0.1 μg/mL	Recombinant Mouse IL-18 BPd Fc Chimera (Catalog # 122-BP)
Neutralization	mouse T cells. The N	ty to neutralize IL-18 BPd inhibition of IL-18/IL-1F4-induced IFN-γ secretion in activated leutralization Dose (ND <sub>50</sub> ) is typically 10-30 μg/mL in the presence of 2 μg/mL Recombinant Chimera, 0.5 ng/mL Recombinant Mouse IL-18/IL-1F4, and 0.1 ng/mL Recombinant Mouse

#### DATA

IL-18 BPd Inhibition of IL-18/IL-1F4-induced IFN-γ Secretion and Neutralization by Mouse IL-18 BPd Antibody. Recombinant Mouse IL-18 BPd Fc Chimera (Catalog # 122-BP) inhibits Recombinant Mouse IL-18/IL-1 F 4 induced IFN-γ secretion in activated mouse T cells in a dose-dependent manner (orange line), as measured by the Mouse IFN-y Quantikine ELISA Kit (Catalog # MIF00). Inhibition of Recombinant Mouse IL-18/ IL-1F4 (0.5 ng/mL) activity elicited by Recombinant Mouse IL-18 BPd Fc Chimera (2 µg/mL) is neutralized (green line) by increasing concentrations of Goat Anti-Mouse IL-18 BPd Antigen Affinitypurified Polyclonal Antibody (Catalog # AF122). The  $\mathrm{ND}_{50}$  is typically 10-30 µg/mL in the presence of Recombinant Mouse IL-12 (0.1 ng/mL).

6 months, -20 to -70 °C under sterile conditions after reconstitution.

## PREPARATION AND STORAGE

Reconstitution	Reconstitute at 0.2 mg/mL in sterile PBS.
Shipping	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below.
	*Small pack size (-SP) is shipped with polar packs. Upon receipt, store it immediately at -20 to -70 °C
Stability & Storage	Use a manual defrost freezer and avoid repeated freeze-thaw cycles.
	<ul> <li>12 months from date of receipt, -20 to -70 °C as supplied.</li> </ul>
	<ul> <li>1 month, 2 to 8 °C under sterile conditions after reconstitution.</li> </ul>

# Mouse IL-18 BPd Antibody

Antigen Affinity-purified Polyclonal Goat IgG Catalog Number: AF122

#### BACKGROUND

Interleukin 18 binding protein (IL-18 BP) is a secreted glycoprotein, which functions as an IL-18 antagonist by binding to IL-18 and blocking its biological activity. IL-18 BP bears no amino acid sequence homology to the membrane-associated IL-18 and IL-1 receptor proteins. The gene for human IL-18 BP has been localized to chromosome 11q13. It encodes for at least four isoforms by alternative splicing. The IL-18 BP isoforms a and c each contain one immunoglobulin (Ig)-like C2-type domain while isoforms b and d lack a complete Ig domain. The complete Ig domain has been shown to be essential to the binding and neutralizing properties of the binding proteins. Two isoforms of mouse IL-18 BP (c and d) containing the complete Ig domain have also been isolated and shown to neutralize IL-18 bioactivity. Human and mouse IL-18 BPs share approximately 61% amino acid sequence identity. Several poxviruses also encode proteins with sequence similarity to the human and mouse IL-18 BP. Viral IL-18 BPs have been shown to bind and inhibit IL-18 responses and may be involved in modulating host immune responses. The expression of IL-18 BP is markedly up-regulated by IFN-y, suggesting that IL-18 activity is modulated by a negative feedback mechanism mediated by IL-18 BP.
