# **Human gp130 Antibody**

Antigen Affinity-purified Polyclonal Goat IgG Catalog Number: AF-228-NA

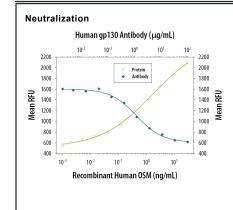

| DESCRIPTION        |                                                                                                                                                                                                                                                      |  |  |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Species Reactivity | Human                                                                                                                                                                                                                                                |  |  |
| Specificity        | Detects human gp130 in direct ELISAs and Western blots. In direct ELISAs, less than 2% cross-reactivity with recombinant recombinant mouse gp130, recombinant human (rh) IL-1 sRI, rhIL-1 sRI, rhIL-2 sRβ, rhIL-2 sRγ, rhIL-4 sR, and rhIL-6 sR is α |  |  |
| Source             | Polyclonal Goat IgG                                                                                                                                                                                                                                  |  |  |
| Purification       | Antigen Affinity-purified                                                                                                                                                                                                                            |  |  |
| Immunogen          | S. frugiperda insect ovarian cell line Sf 21-derived recombinant human gp130 Leu24-Glu619 (Glu619Asp) Accession # P40189                                                                                                                             |  |  |
| Endotoxin Level    | <0.70 EU per 1 µg of the antibody by the LAL method.                                                                                                                                                                                                 |  |  |
| Formulation        | Lyophilized from a 0.2 µm filtered solution in PBS with Trehalose. See Certificate of Analysis for details. *Small pack size (-SP) is supplied as a 0.2 µm filtered solution in PBS.                                                                 |  |  |

## **APPLICATIONS**

Please Note: Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.

| Western Blot   | 0.1 μg/mL                    | Recombinant Human gp130 (Catalog # 228-GP)                                                                                                                                                                 |
| Neutralization |                              | to neutralize Oncostatin M/OSM-induced proliferation in the TF-1 human erythroleukemic et al. (1989) J. Cell Physiol. <b>140</b> :323. The Neutralization Dose (ND <sub>50</sub> ) is typically 2-10 μg/mL |
|                | in the presence of 0.8       | ng/mL Recombinant Human Oncostatin M/OSM.                                                                                                                                                                  |

### DATA

Cell Proliferation Induced by Oncostatin M/OSM and Neutralization by Human gp130 Antibody. Recombinant Human Oncostatin M/OSM (Catalog # 295-OM) stimulates proliferation in the TF-1 human erythroleukemic cell line in a dose-dependent manner (orange line). Proliferation elicited by Recombinant Human Oncostatin M/OSM (0.8 ng/mL) is neutralized (green line) by increasing concentrations of Goat Anti-Human gp130 Antigen Affinity-purified Polyclonal Antibody (Catalog # AF-228-NA). The ND<sub>50</sub> is typically 2-10 µg/mL.

### PREPARATION AND STORAGE

| Reconstitution      | Reconstitute at 0.2 mg/mL in sterile PBS.                                                                               |  |  |
|---------------------|-------------------------------------------------------------------------------------------------------------------------|--|--|
| Shipping            | The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below. |  |  |
|                     | *Small pack size (-SP) is shipped with polar packs. Upon receipt, store it immediately at -20 to -70 °C                 |  |  |
| Stability & Storage | lice a manual defrect freezer and avoid repeated freeze thaw cycles                                                     |  |  |

- 12 months from date of receipt, -20 to -70 °C as supplied.
- 1 month, 2 to 8 °C under sterile conditions after reconstitution.
- 6 months, -20 to -70 °C under sterile conditions after reconstitution.

Gp130, the common signal transducing receptor component shared by the functional receptor complexes of the IL-6 family of cytokines, belongs to the class I cytokine receptor family. Binding of IL-6 (IL-11) to either the membrane-anchored or soluble IL-6 R (IL-11 R) initiates the association of IL-6 R (IL-11 R) with gp130 which then undergoes homo-dimerization and signal transduction. With other IL-6 family cytokines, such as LIF and OSM, signal transduction is triggered by the hetero-dimerization of gp130 and LIF R or OSM R.

Gp130 is expressed in all organs examined. Soluble gp130, which apparently arises either from proteolytic cleavage of the membrane-bound receptor or from alternative splicing, has been detected in human serum. At the present time, the in vivo functions of soluble gp130 are not clearly understood. In in vitro experiments, natural or recombinant soluble gp130 has been shown to have inhibitory effects on OSM and CNTF activities.
