PARC Antibody

Catalog No: #24204

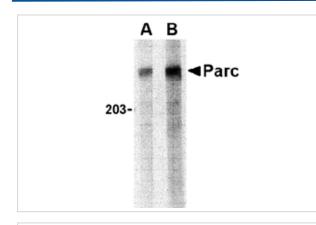

Description

Orders: order@signalwayantibody.com Support: tech@signalwayantibody.com

## Product Name PARC Antibody Rabbit Host Species Clonality Polyclonal Purification Affinity chromatography purified via peptide column E WB ICC Applications Hu Ms Species Reactivity Peptide Immunogen Type Immunogen Description Raised against a 17 amino acid peptide from near the carboxy terminus of human PARC. Target Name PARC Other Names p53-associated parkin-like cytoplasmic protein, UbcH7-associated protein 1 Accession No. NP\_055904 Formulation Supplied in PBS containing 0.02% sodium azide. Storage Can be stored at -20°C, stable for one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

## Images

Western blot analysis of PARC in Daudi lysate with PARC antibody at (A) 1 and (B) 2 ug/mL.

## Background

The continued localization of p53 to the nucleus is essential for its function as a tumor suppressor. PARC, a large, Parkin-like ubiquitin ligase has recently been identified as a cytoplasmic anchor protein in p53-associated protein complexes. In the absence of stress, PARC inactivation results in nuclear localization of p53 and activation of p53-dependent apoptosis, while overexpression of this protein promoted cytoplasmic sequestration of p53. Surprisingly, PARC knockout mice were viable and exhibited no obvious phenotype, suggesting that other proteins, such as the highly related cullin family of E3 ubiquitin ligases, may perform similar functions in the absence of PARC. Additionally, it has been suggested that p53 binding to PARC may serve to control PARC function.
