

MPYS Antibody

Catalog No: #24935

Orders: order@signalwayantibody.comSupport: tech@signalwayantibody.com

Description

Product Name	MPYS Antibody
Host Species	Rabbit
Clonality	Polyclonal
Purification	Affinity chromatography purified via peptide column
Applications	E WB ICC
Species Reactivity	Hu Ms
Immunogen Type	Peptide
Immunogen Description	Raised against a 17 amino acid peptide near the carboxy terminus of human MPYS.
Target Name	MPYS
Other Names	MPYS, Transmembrane protein 173, TMEM173, ERIS, MITA, STING
Accession No.	NP_938023
Formulation	Supplied in PBS containing 0.02% sodium azide.
Storage	Can be stored at -20°C, stable for one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Images

Western blot analysis of MPYS in A-20 cell lysate with MPYS antibody at (A) 1 and (B) 2 ug/mL.

Immunocytochemistry of MPYS in A20 cells with MPYS antibody at 5 ug/mL.

Background

MPYS is a recently identified plasma membrane tetraspanner that is associated with major histocompatibility complex class II (MHC-II) and mediates its transduction of apoptotic signals. It has also been found to be associated with VISA, a mitochondrial protein that acts as an adaptor in virus-triggered signaling. MPYS also interacts with IRF3 and recruits the kinase TBK1 to the VISA-associated complex, acting as a critical mediator of virus-triggered IRF3 activation and interferon (IFN) expression. It is thought that the binding of nucleic acid to the innate immune protein RIG-I causes complex formation between RIG-I, VISA, and MPYS. This complex then recruits TBK1 to phosphorylate IRF3 which then directly activates IFN transcription. At least three isoforms of MPYS are known to exist.

Note: This product is for in vitro research use only and is not intended for use in humans or animals.
