

New Biologically Active Proteins

Over 450 Biologically Active Proteins

- Biological activity 100% guaranteed
- Cytokines, Chemokines, Growth Factors, and more
- >90% pure
- <1 EU/ μ g endotoxin
- Human, mouse and rat recombinant proteins

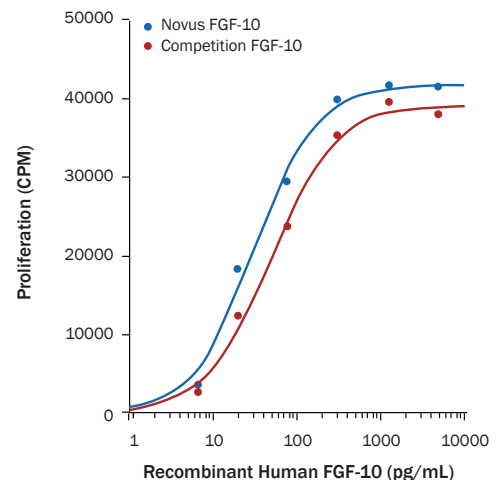

Recombinant Human FGF-2/FGF-basic (NBP2-34921; blue) induces proliferation in FGFR1c-expressing BaF3 cells at concentrations that are equal or better than the competition (red).

Recombinant Human EGF (NBP2-34952; blue) induces proliferation in Balb/c 3T3 cells at concentrations that are equal or better than the competition (red).

Recombinant Human IL-13 (NBP2-35018; blue) induces proliferation in TF-1 cells at concentrations that are equal or better than the competition (red).

Recombinant Human FGF-10 (NBP2-34927; blue) induces proliferation in FGFR2b-expressing BaF3 cells at concentrations that are equal or better than the competition (red).

For research only.
Not for use in
diagnostic procedures.

New Biologically Active Proteins

BMP2	Growth Hormone	LIF
CCL21	HB-EGF	MCP1
Ccl3	IGF1	MCSF
CNTF*	IL10	MDC
CXCL2	IL13	Neurotrophin 4*
CXCL4L1	IL17	NGF*
EGF	IL2	Noggin*
Eotaxin	IL21	PDGF-AA
EREG	IL22	PDGFB
FGF1	IL3	PDGF-BB
FGF19	IL4	Prolactin
FGF-2	IL5	RANTES
FGF21	IL6	SCF
FGF23	IL7	SDF1 alpha
FGF7	IL8	Sonic Hedgehog*
G-CSF	Interferon gamma	Thrombopoietin
GDNF	Laminin*	TNF alpha
GM-CSF	Leptin	VEGF 165

*Neuroscience related protein
