

## Anti-Dnmt1 (1037-1386) antibody, affinity-purified (rabbit polyclonal), ChIP grade

70-203      50ug

Dnmt1 (DNA (cytosine-5)-methyltransferase 1) has a role in the establishment and regulation of tissue-specific patterns of methylated cytosine residues (epigenetics). Hypermethylation in promoter regions is associated with repression of gene expression. Aberrant methylation patterns are associated with certain human tumors and developmental abnormalities (1, 2). This antibody was raised by Prof. S. Tajima of Osaka Univ. (3, 4).

### Applications

- 1) **Western blotting** (0.2~1 ug /ml)
- 2) **Immunoprecipitation and ChIP**. Especially good for denatured protein and useful for ChIP assays (with mouse embryonic stem cells as an example). One ug of the antibody can precipitates 0.5~1.0 ug of Dnmt1.
- 3) **Indirect immuno-fluorescence staining** (2,000~5,000 fold dilution). Background can be lowered by treatment of sample with SDS/TritonX-100 mixture (1:5 weight ratio).

**Antigen:** Recombinant mouse Dnmt1 (amino acids 1037-1386) purified by SDS-PAGE

**Antibody:** Affinity-purified with the recombinant Dnmt1(1037-1386)

**Reactivity:** mouse, human, Xenopus

**Form:** 1 mg/ml in PBS, 50% glycerol, 0.05% sodium azide, (and trace of ammonium sulfate)

**Storage:** -20°C (long period: -80°C)

**Data Link** UniProtKB/Swiss-Prot [P13864](#) (DNMT1\_MOUSE)
