## Advanced Glycation End Products (AGEs) Anti Pentosidine Monoclonal Antibody (Clone No. PEN-12) Biotin conjugated

Reaction of protein amino groups with glucose leads, through the early products such as a Schiff base and Amadori rearrangement products, to the formation of advanced glycation end products (AGEs). Recent immunological studies using anti-AGEs antibody (6D12) demonstrated the presence of AGEs-modified proteins in several human tissues: (i) human lens (nondiabetic and noncataractous), (ii) renal proximal tubules in patients with diabetic nephropathy and chronic renal failure, (iii) diabetic retina, (iv) peripheral nerves of diabetic neuropathy, (v) atherosclerotic lesions of arterial walls, (vi)  $\beta$ 2-microglobulin forming amyloid fibrils in patients with hemodialysis-related amyloidosis, (vii) senile plaques of patients with Alzheimer's disease, (viii) the peritoneum of CAPD patients, (ix) skin elastin in actinic elastosis, and (x) ceriod / lipofuscin deposits. These results suggest a potential role of AGEs-modification in normal aging as well as age-enhanced disease processes. This antibody named as 6D12 has been used to demonstrate AGEs-modified proteins in these human tissues, indicating potential usefulness of this antibody for histochemical identification and biochemical quantification of AGEs-modified proteins.

Pentosidine is one of the Maillard compounds identified by Monnier *et al* in 1989. It has been proved to cross-link Arginine to Lysine residue and be detected in  $\beta$ 2-microglobulin from patients with hemodialysis-related amyloidosis.

| Package Size          | 50 μg (200 μL/ vial)   |
|-----------------------|--|
| Format                | Mouse monoclonal antibody, Biotin conjugated 0.25 mg/mL                              |
| Buffer                | Block Ace as a stabilizer, containing 0.1% Proclin as a bacteriostat                 |
| Storage               | Store below $-20^{\circ}$ C.   |
|                       | Once thawed, store at 4°C. Repeated freeze-thaw cycles should be avoided.            |
| Clone No.             | PEN-12   |
| Subclass              | IgG1   |
| Purification method   | The splenic lymphocytes from BALB/c mouse, immunized with pentosidine-HSA were       |
|                       | fused to myeloma P3U1 cells. The cell line (PEN-12) with positive reaction was grown |
|                       | in ascitic fluid of BALB/c mouse, from which the antibody was purified by Protein G  |
|                       | affinity chromatography and conjugated.  |
| Working concentration | for immunohistochemistry: 5-10 $\mu$ g/mL ; for ELISA: 0.1-1.0 $\mu$ g/mL            |
| Specificity           | Reaction to pentosidine-HSA was suppressed by free-pentosidine in competitive ELISA. |

Pentosidine
